

Education

University of Vermont – B.A. in Computer Science,

Relevant courses: Software Engineering, Computability and Complexity, Statistical Computing, Data Structures and Algorithms, Linear Algebra, Multivariable Calculus, Discrete Structures, Evolutionary Robotics, Advanced Programming, Applied Probability, Data Science, Statistics for Engineering, Artificial Intelligence(AI), Operating Systems, Mobile App Development

Minor in Statistics

Presidential Scholarship Recipient

Skills

Python(Pandas, NumPy, NLTK, scikit-learn), C++, Java, Swift, HTML, CSS, C, PHP, JavaScript, SQL, SAS, R, Git, Flask, AWS, REST APIs, SQLite/MySQL, NLP, classification models, probability

Relevant Projects

Evolving Movement in Simulated Robots

Evolutionary robotics:

May 2025

- Designed and implemented an AI system in Python using PyBullet and Pyrosim to build and evolve virtual quadruped robots with neural networks through fitness-based selection
- Instrumented simulations to compute and log real-time performance metrics(distance traveled, movement ratio, and joint velocities)
- Performed guided A/B testing using measures of fitness, emphasizing sustained forward motion

Web App with Integrated Machine Learning Model for Phishing Detection

UVM Hackathon 2024 - 2nd Place:

April 2024

- Developed an ML pipeline using scikit-learn and NLTK to classify phishing emails
- NLTK for natural language processing(NLP)—parsing, stemming, tokenizing, and extracting
- Built a basic dynamic UI with HTML/CSS/JS

Smithbase - Data Modeling and Web App

Software Engineering:

Spring 2024

- Designed and implemented a complex relational database in MySQL for a social media-style web application
- Developed UI using HTML, CSS, and JavaScript for dynamic page content and integrated Python scripts and SQL queries to serve dynamic content
- Emphasized modular code structure and collaborative development practices

Climate Kitchen - Mobile App Development (Course Project)

- Led an agile software development team to create an app for the university's Climate Kitchen
- Designed and implemented a complex relational database structure with SQLite and Python
- Integrated multiple REST APIs
- SwiftUI interfaces and Firebase for user profiles and authentication

Technical Experience

Mentor - Girls Who Code

- Mentored young students in introductory programming concepts and creative coding projects
- Designed and led three engaging programming lessons in Python and JS
- Promoted diversity and inclusion in tech by encouraging confidence and collaboration among young women in STEM

Additional Experience

Support Staff, Hen of the Wood - Burlington

Jun. 2025 - Oct. 2025

- Maintained seamless fine dining service at an acclaimed restaurant recognized for its locally sourced, seasonally inspired menu and extensive beverage program
- Adapted efficiently to daily menu changes and evolving service needs while maintaining the restaurant's high standards of professionalism and hospitality
